Custom made...according to your individual requirements

Satellite Earth Stations, Teleports as well as Broadcast and Broadband operations are always focused to distribute and to manage their RF signals in a most efficient and reliable way taking into consideration that superior RF performance, excellent signal quality and operational stability has to be assured.

RF-Design has extensive experience in the field of RF equipment and RF distribution solutions and is also well known within this industry for developing and manufacturing custom made RF distribution solutions.

Our experienced development and project team closely cooperates with you always focusing on your individual solution especially designed and manufactured for your specific requirement and application.

With our competence in RF distribution solutions, our flexibility and engineering power we have realized various custom-made RF distribution solutions for major Satellite Earth Stations, Teleports as well as Broadcast and Broadband organisations around the globe.

To get your custom-made solution just contact us and we would be happy to work with you and to realize the solution you need for your operation.

Below you see some example of custom built solutions we have developed and provided in the past.

16:8 L-Band Switch Matrix with optical outputs

64:8 Switch Matrix with Relays

BDC unit with embedded KU to L-Band converters and 2 x 8 L-Band outputs
